

# CLASS- VII DATE: 19/5/2020

## B. Fill in the blanks with missing words.

1. Potato tubers store starch in \_\_\_\_\_ cells.
2. \_\_\_\_\_ acts as cement and makes sclerenchyma hard.
3. Parenchyma containing chloroplasts is known as \_\_\_\_\_.
4. \_\_\_\_\_ tissue is responsible for the elongation of the stem.
5. The increase in the diameter of the root occurs by the division of \_\_\_\_\_ tissue.

## C. State whether the following statements are true or false:

1. Permanent tissues have definite form and size.
2. Meristematic tissues are also called growth tissues.
3. Intercalary meristem increases the diameter of the plant parts.
4. Parenchyma serves as the packing material in the body of an organism.
5. Sclerenchyma tissue is composed of live cells without any spaces in between.
6. Phloem is a living tissue while xylem is a dead tissue.

## UNDERSTANDING-BASED QUESTIONS

### A. Match the following.

#### Column A

1. Lignin deposit
2. Manufacture of food
3. Transportation of food
4. Base of leaves
5. Thickened corners

#### Column B

- (a) Collenchyma
- (b) Intercalary meristem
- (c) Sclerenchyma
- (d) Chlorenchyma
- (e) Phloem
