BY INDIRA MOHANTA

Part-1

Key Concepts

- Uses of water in the family
- Sources of water at home and in the surroundings
- Storage of water in the family
- Need for storage of water
- Simple properties of water—colour, taste, smell, shape
- Activities done with and without water in the family
- Need for judicious use of water and its reuse in the family

USES OF WATER

We need water to live. Plants and animals also need water to live.

There are many uses of water.

We need water to drink.

We need water to take bath.

We need water to wash fruits and vegetables and to cook food.

We need water to wash clothes.

We need water to grow crops.

Stop to Answer

- Can you name some activities you do regularly without using water?

Animals and birds also need water.

SOURCES OF WATER

We get water from rivers, lakes, ponds, springs and oceans. We also get water from rainfall.

Water is also present under the ground. We call it groundwater. We use a tubewell, hand pump or a well to get groundwater.

Good to know!

The water present in seas and oceans is salty. So we cannot drink it.

In cities, water from rivers and lakes is cleaned at places called water treatment plants. The water is then supplied to different parts of the city through pipes. In our home, we get the water from a tap.
