# Sub-Chemistry

## Class VI

APPOINTMENT / MEETING

Date ~~7.7~~ 20

Chapter - Element, Compounds, Symbols & Formula Part 2 & 8

(i) Give reasons

(a) A frying pan is made up of steel but its handle is made up of wood

Ans: This is because steel is a good conductor of heat and it allows heat to pass to the food kept in the pan for cooking while wood and plastic being bad conductors or insulators do not get too hot to burn our hand.

(b) Graphite is used to make lead of the pencils

Ans: This is because graphite can mark the paper black

(c) Argon is filled in electric bulbs.

Ans: This is because it does not react with the tungsten filament of the bulb and prevents it from destruction.

APPOINTMENT / MEETING

② Answer the following :-

(a) Why are copper and aluminium used to make wire?

Because they are the good conductors of electricity.

(b) What do you understand by the statement 'metals are ductile and malleable'?

Ductile means we can make wire from metals and malleable means we can make sheets.
