Pollution is a cause of grave concern for the whole of mankind. The last century has seen the rise of this rising as it has made an envelope to the entire nature and the whole world.

Pollution is popularly categorized as air pollution, water pollution and noise pollution respectively. Air pollution is that form of pollution which refers to the **contamination** of air, irrespective of indoors or outdoors. It occurs when harmful gases, dust and smoke enter into the atmosphere and make it unhealthy for humans, animals and plants as the air becomes dirty.

The effects of air pollution is very harmful. The immediate consequence is the **reduction** in oxygen content in the air, the release of potentially harmful gases causing asthma and even ling cancer. They also damage plants and crops yields. Global Warming and Ozone depletion are other results of the same.

Similarly water pollution is the contamination of water bodies. Water pollution occurs when chemicals wastes and plastics are directly or indirectly discharged into water bodies without any treatment. It has harmful effects on aquatic life in rivers and oceans. This also adversely affects the soil where river water is used for irrigation.

The third category which is noise pollution is the presence of excessive noise that may harm the activity or balance of human or animal life. The source of most outdoor noise worldwide is mainly machines and transportation system, motor vehicles, air crafts and trains. Noise pollution can cause loss, sleep disturbances and other harmful effects.

It is essential to control all the three forms of pollution. To control air pollution, environmentalists regulations for vehicles and industries. Also extending and protecting the green cover around us is one of the measures to fight air pollution as trees take carbon dioxide and release oxygen into the air. The government has also taken steps to stop noise from industries through licensing ets and by stopping honking, late night loud music etc.
